what's new for 2004

microwaves**slimline model**

Space in the modern kitchen is always at a premium. With the increasing development of new labour saving devices, space on the work surface becomes even more precious.

Recognising this fact Panasonic engineers were given the challenge of creating a new oven - smaller on the outside without losing cooking space inside. The result - our new Slimline Combi.

By moving the fan system from the rear of the oven to the roof we have created an oven 20% smaller on the outside whilst maintaining the interior cooking space.

catalytic clean

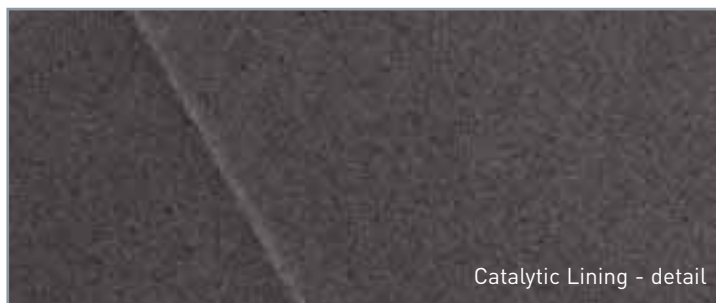

Market research reveals that of all the tasks in a modern kitchen, cleaning the oven is the least favourite. Panasonic microwave ovens have always been designed for ease of cleaning. Wipe clean interiors and carefully designed accessories are now complimented by the addition of a new catalytic self clean oven back. Unique to Panasonic microwaves the catalytic liner, in the compact combination range, helps to repel spills and splashes, making the oven simpler to clean.

vacuum cleaners**twin bin - extended range**

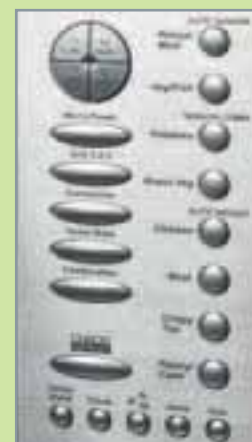

Greater power and performance has been enhanced in the new 2004 Panasonic Vacuum cleaners. Twin bin models now boast an even better specification across both the upright and cylinder vacuum cleaner range. Power has also been increased, our most powerful upright now boasts an 1800W motor

Slimline Microwave

Catalytic Lining - detail

microwaves designed for the UK

Panasonic has specifically designed and developed its range of ovens to meet the requirements of the UK household. At the Test Kitchen in Bracknell, Berkshire, initial product tests are completed, before the automatic programmes are developed on each model, followed by recipe testing and finally production of the cookery book, uniquely for the UK market.

inverter technology

Unique to Panasonic, Inverter Technology, available on most models, replaces the conventional transformer and capacitor with an inverter circuit board to offer many benefits:

Fast Cooking 900W (IEC) or 1000W (IEC) of power.

Check individual models for details.

Constant Power Most microwaves only operate on constant power when High or Full is selected. Other power levels are achieved by the microwave pulsing on and off. Inverter models give constant power for medium and low levels resulting in more efficient and even heating.

Even Cooking When cooking or reheating, Inverter technology ensures that food is heated evenly improving texture and flavour.

Lighter Ovens Microwaves using Inverter Technology weigh approximately 3kg less than ordinary microwaves. Easy to move for cleaning!

chaos defrost

Unique to Panasonic, Chaos Defrost uses random pulses of microwave energy to dramatically reduce defrosting times. Not only does this speed up the process it also produces very even defrosting. No more 'part cooked' chops with frozen pieces in the centre. Chops can be used immediately for cooking.

UK test kitchen

The Test Kitchen at Bracknell is staffed by a team of qualified Home Economists. Being involved with the complete development process they can speak confidently on any aspect relating to cooking or operating your product. In fact we have a dedicated **Cookery Advice Line** where you can speak directly with one of our Home Economists who offer friendly guidance on making the most of your Panasonic microwave oven or breadmaker. Details on how to contact the Cookery Advice Team are contained in the **UK Cookbook** supplied with your appliance.

Or visit www.cooking-corner.co.uk for a full list of the latest "hot" recipes.

**microwave oven range overview**

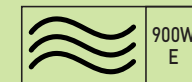

The Panasonic range of microwaves is grouped into 3 categories and the layout of this brochure reflects these **Combination Ovens** which cook using microwave/grill/convection are detailed on pages 4-9.

Grill Ovens which cook using microwave/grill are on pages 10-11 and

Microwave Only Ovens are detailed on pages 12-15.

REHEATING CATEGORIES

The label on the front of your oven will help you in using the heating instructions found on food packs.

family size dimension 4 inverter range

These Inverter models offer the ultimate in cooking performance.

They combine the efficiency of a microwave with the traditional browning and roasting from a conventional oven and grill.

Special attention is given to ease of use and ease of cleaning.

NN A873S • family size dimension 4

| 1000W (IEC) Inverter microwave | 32 litre (1.1 cu.ft) interior capacity | Easy clean enamel lining with catalytic roof | 1500W radiant grill - 3 settings | Convection oven (40, 100-250°C) | 2 level convection cooking | Auto sensor reheat and cook | Auto weight cook | Stainless Steel finish

| 2 LEVEL COOKING

When you use the convection mode, the two shelves provide all the versatility of a traditional oven, which is perfect for batch baking or cooking large dishes of food that would not normally fit on the turntable.

| ENAMEL LINING

The enamel lining in these models is very hard wearing, easy to clean and will not discolour.

The family sized 32 litre range now offers **TWO LEVEL COOKING**. On convection, the two shelves supplied provide the versatility of a traditional oven enabling batch baking or large dishes of food to be cooked. The full **CONVECTION TEMPERATURE RANGE** 40, 100-250°C ensures success with meringues and pastries to Yorkshire puddings and roast joints. The easy to clean **ENAMEL INTERIOR** has a **RADIANT GRILL** recessed in the roof with a self clean catalytic liner above. **TURBO BAKE** combines the Convection Oven and Grill to give extra crisping and browning to food, such as pizzas, while significantly reducing the cooking time. **AUTO SENSOR PROGRAMS** will calculate the cooking time for you. The 27 litre compact range with stainless steel interior features the new **CATALYTIC CLEAN BACK**, making the oven easier to keep clean. The variable **QUARTZ GRILL** and fan assisted oven in these models are ideal for today's busy lifestyle.

slimline oven

This oven offers a different convection system which can traditionally cook and brown a range of popular foods.

Allows 20% more space on the work surface without a reduced oven capacity!

NEW

Space in the modern kitchen is always at a premium, especially on the work surface. Microwave ovens compete with an ever increasing range of new appliances, designed to make life easier.

Recognising this fact, Panasonic gave themselves the challenge to reduce the size of one of their best selling microwaves - without sacrificing the cooking capacity of the oven.

By completely re-designing the mechanics of the microwave, **Panasonic have reduced the depth of the oven by 20%** (when compared to an equivalent Panasonic model).

Re-positioning the fan system in the roof of the oven, rather than at the rear has dramatically reduced the depth of the oven. This means that you can enjoy the advantages of microwave, grill and convection heating in more compact kitchens, which may feature narrower, 500mm work surfaces. More importantly, this has been achieved without reducing the usable cooking space inside the oven.

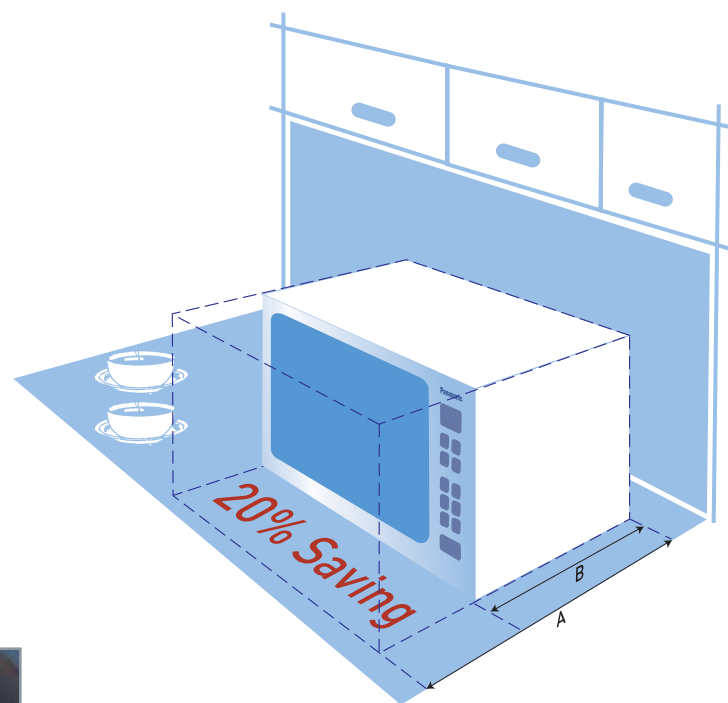

Slimline oven design

As the fan has been moved to the roof of the oven, the exterior size has been reduced.

Slimline Oven

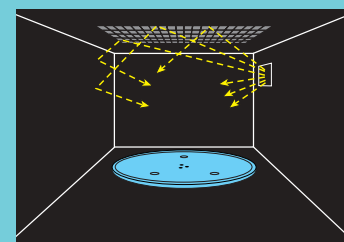

Traditional Combination Oven

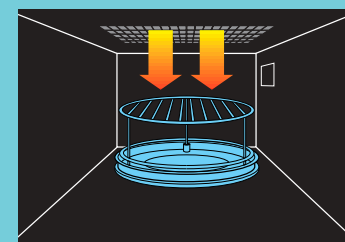

- A** - Depth of standard oven (equivalent Panasonic model)
B - Reduced depth of NEW Slimline oven - gives 20% more workspace on a standard, 600mm worktop and is perfect for narrower, 500mm worktops

family size microwave range

If you want a microwave that reheats quickly, defrosts evenly, and is easy to operate, read about our Microwave range.

Auto weight programs on the touch control models will automatically cook your food to perfection, once the weight has been entered.

If you plan to use your Microwave regularly for defrosting, ask for a model with the unique **CHAOS DEFROST** system. This ensures that chops, mince, chicken portions and whole joints are thoroughly defrosted without them starting to cook. **TURBO REHEAT** provides an added boost of microwave power up to 1000 Watts (IEC), for the initial part of the cooking time, when reheating foods such as soup and baked beans - a useful feature when feeding hungry children who want food fast. Models with **AUTO GUIDE** make the oven very simple to operate. The scrolling message shown in the display window clearly directs you to the next pad to press, while the addition of a **CHILD LOCK** provides extra security to prevent little fingers interfering with the programming of the oven.

family size breadmaker range

With the superior build quality and simplicity of design and operation, these breadmakers are an ideal addition to your home. They give you the convenience of having fresh bread at anytime from fresh basic ingredients, and can cater for particular dietary requirements e.g. gluten free, low salt, high fibre.

SD 253 • breadmaker

- Simple easy to use control panel with large read out
- Programmed in UK Test Kitchen with UK ingredients
- Automatic raisin nut dispenser
- Gluten Free Program
- Extensive recipe/ instruction book - written by Home Economists - includes over 100 recipes
- 3 loaf sizes - medium, large and extra large
- Crust Colour Control - select from three crust colours on the basic bake option - dark, medium and light
- 100% whole wheat bread option
- French/Italian bread option
- Pizza dough option - only 45 minutes
- Digital timer - up to 13 hours
- Includes measuring cup and spoon

Quality from Experience

Panasonic launched Breadmakers into the UK market over 16 years ago. The SD 253 has recently been **APPROVED BY THE GOOD HOUSEKEEPING INSTITUTE** for 2004.

3 easy steps to a freshly baked loaf of bread

01 - Add the ingredients
Measure the yeast, flour, sugar, salt, butter, water etc. Place in the bread pan.

02 - Select program & press start
The mixing blade combines the ingredients to produce a dough. This is then kneaded, proved and baked.

03 - Remove the baked loaf
The non-stick coated bread pan means bread will slide out easily.

Raisin/Nut Dispenser on the SD 253

The **SD-253** has a **RAISIN NUT DISPENSER** that automatically adds additional ingredients to your recipe, while the **SD-252** has a **RAISIN BEEP** signal to prompt the user to add their ingredients. The **SD-253** can also bake gluten free loaves on the **GLUTEN FREE PROGRAM**, using a wide range of gluten free bread mixes. Both models have a **SUPER RAPID OPTION** to produce a white or brown loaf in only 1 hour 55 minutes. They have a **SANDWICH OPTION** to bake softer bread with a thinner crust - ideal for making perfect sandwiches. Plus a **VERSATILE DOUGH OPTION** to make dough from white, brown or wholemeal flour for rolls, buns, croissants etc. With a **FRENCH DOUGH OPTION** for crusty French sticks. The **BAKE ONLY OPTION** is also ideal to cook a selection of tasty cakes and teabreads.

SD 252 • breadmaker

- Simple easy to use control panel

upright and cylinder cleaners

the panasonic vacuum cleaners range

upright or cylinder?

Manufactured to the most stringent quality standards the Panasonic brand name stands for reliability, functionality and affordability. This range of vacuum cleaners is the most extensive range yet from Panasonic offering new, practical and innovative features to simplify your household cleaning.

Invariably people have a strong preference for either an upright or a cylinder cleaner.

Upright cleaners have larger dust capacity and so require less frequent emptying. See the new **4 litre Twin Bin** upright with its unique double bin dust canister. All Panasonic upright cleaners feature **On-board tools** and **Easy access hose** for added convenience.

The MC E8000 Series **180° Cleanability** with a large **3.5 litre dust capacity** means you can vacuum for longer with a minimum of fuss. The MC E8015 has a **deluxe floorhead** which is ideal for wooden floors.

the panasonic vacuum cleaners range

bagged or bagless?

Yet more choice! There are advantages to be gained both from disposable paper dustbags and the bagless cleaner. Simple, clean and hygienic to dispose of paper dustbags ensure that the dust stays in the bag. The bagless option however, saves on the cost of dustbags whilst providing a convenient method of dust disposal.

bagless cylinder cleaners

What’s the difference?

The efficiency of the airflow through any vacuum cleaner is fundamental to its performance. The MC E6003 is fitted with a NEW CleanStream® HEPA Filter that traps dust and dirt on the outside of the filter, while allowing air to pass through, improving the cleaning efficiency. The slippery surface is easy to clean with a quick tap, or rinse under running water.

CleanStream® filters resist permanent clogging, allowing suction to stay longer producing consistent performance over the lifetime of the vacuum cleaner. Due to the very light weight of the cleaner – just 3.2kg, the MC E6003 comes with a shoulder strap.

MC E6003 • bagless cylinder cleaner

- 6

centrifugal force compression system

Cefcos creates a spiralling system within the dust canister which compresses the dust and debris away from the filter creating a strong and powerful suction even as the canister continues to fill. The force of the centrifugal airflow compacts the dust within the canister allowing over twice the amount of dust to be collected when compared to previous models of this size.

5-stage filtration system

After entering the vacuum, air is cleaned as it passes through 5 filters before it is expelled as exhaust air. Since a swirling air stream cleans the pre-filter to prevent blockage, you get a long-lasting and powerful suction.

Panasonic shavers boast a variety of features designed to ensure a fast, efficient and smooth shave. **WET AND DRY** gives greater versatility as well as enabling **EASY CLEANING**. **LINEAR DRIVE** motor technology gives fast motor speed and a quick and smooth shave. The **ERGONOMIC DESIGN** and S-Curve Profile adds to the comfort, comfortable to hold and use! Plus, the ES 8093's **MULTI DIRECTIONAL PIVOTING HEAD** follows the contours of your face in any direction.

ES 8093 • linear shaver

1 2 3 4 5 6

- Wet-Dry
- RC
- Washable shaver for easy cleaning
- Multi-direction pivoting head
- Fast 13,000 rpm Linear motor / Multi Angle Floating 3-Head (w/slit blade)
- Turbo Cleaning mode for easy maintenance
- LCD display shows: remaining battery indicator in 10% increments, Cleaning reminder, Charge status indicator
- Slide up Trimmer
- Charge Time 1 hour, 45 min operating time
- Power source 100-240v
- Accessories: Deluxe Travel Pouch, Cleaning brush, Charge adapter.

ES 8017 • linear shaver

2 3 4 5

- Washable shaver for easy cleaning
- AC/RC
- Fast 13,000 rpm Linear motor
- Independently floating triple heads
- Battery capacity lamp
- Charge status lamp
- Pop up Trimmer
- Charge Time 1 hour, 45 min operating time
- Power source 100-240v
- Accessories: Travel Pouch, Cleaning brush, A/C recharge cord

ES 7027 • shaver

2 3 5

- Washable shaver for easy cleaning
- AC/RC
- 10,000 rpm motor
- Independently floating triple heads
- Battery Capacity lamp glows three different colours (Green 100-30%, Orange 30-10%, Red 10-0%)
- Pop up Trimmer
- Charge Time 1 hour, 60 min operating time
- Power source 100-240v
- Accessories: Travel pouch, Cleaning brush, A/C recharge cord.

ES 7026 • shaver

2 3 5

- Washable shaver for easy cleaning
- AC/RC
- 10,000 rpm motor
- Independently floating triple heads
- Low Battery Indicator
- Pop up Trimmer
- Charge Time 1 hour, 60 min operating time
- Power source 100-240v
- Accessories: Travel pouch, Cleaning Brush, A/C recharge cord.

ES 4025 • shaver

1 2 3 5

- Wet-Dry
- RC
- Washable shaver for easy cleaning
- 8,800 rpm motor
- Floating twin heads
- Charge Indicator
- Pop up Trimmer
- Charge Time 8 hours, 21 min operating time
- Power source 220-240v
- Accessories: Travel pouch, Cleaning Brush, Charging Adapter.

building in your panasonic oven

| Trim kits are available for most of our ovens | When building-in we recommend that models are placed below a Conventional Oven to avoid over-heating, when installing in a standard oven housing | If you install any Microwave Oven above a built-in Conventional Oven a gap of at least 15cm (6ins) is required from the top of the Conventional Oven casing to the bottom of the microwave oven casing | It is important that these ovens draw in cool air. When building-in, the CORRECT Panasonic Trim Kit must be used | For safety, microwaves must always be built-in at least 850mm above floor height especially if small children have access to the kitchen.

on the worktop

| Ovens placed on a worktop must have sufficient airflow around them | We recommend these spaces are allowed.

■ Not available for this model - not designed to be built in
